

September 9, 1939.

Prof. Hugh Stott Taylor,  
Frick Chemical Laboratory,  
Princeton University,  
Princeton, N.J.

Dear Professor Taylor:

I was very much interested in your paper in the May Journal on the Dehydrogenation of Cyclo-octene. I am taking the liberty of enclosing an old reprint in view of your conclusion that Willstatter probably did not obtain cyclo octa tetraene. While it is quite probable the earlier catalytic experiments did not result in this substance, they later, with Waser and myself certainly gave us the expected compound.

With kindest regards,

Sincerely yours,

MH/m

Michael Heidelberg.
